PROJECT

Windows Server 2025 – Active Directory Lab

Project Overview

This project demonstrates the deployment and administration of Windows Server 2025 in a virtualized lab environment using Oracle Virtual Box.

Objectives

- Configure Windows Server network settings and a static IP address.
- Install and configure Active Directory Domain Services (AD DS).
- Configure DNS for domain name resolution.
- Create and manage domain users, organizational units, and security groups.
- Join a Windows client to the domain.
- Apply Group Policy settings and test authentication.

Technologies Used

- Windows Server 2025
- Oracle VirtualBox
- Active Directory Domain Services
- DNS
- DHCP
- Group Policy
- Windows PowerShell

Lab Environment

- Hypervisor: Oracle VirtualBox
- Server operating system: Windows Server 2025 Desktop Experience
- Domain name: To be documented after configuration
- Client operating system: To be documented after testing

Implementation and Testing

Configuration steps, screenshots, PowerShell scripts, and test results will be documented as the project progresses.

Results

Results will be updated after completing and testing each configuration task.

Learning Outcomes

- Windows Server administration
- Identity and access management
- Network configuration and troubleshooting
- Active Directory administration
- Technical documentation

Disclaimer

This is an educational lab project. All configurations are performed in a controlled virtual environment.
